

**HMS SHED 3 & 4, HOLYHEAD**

Some of the UK's most impressive commercial boats are created by the hugely successful Holyhead Marine Services Ltd. In 2011, having won a number of prestigious contracts to build vessels for the Royal Marines and the Ministry of Defense, the firm decided that it needed to create 40% more working space. Having collaborated with Datrys on previous expansion projects, they approached us again to take on the challenge of building their fourth engineering workshop and the most ambitious yet.

Working within the client's minimum requirements for the size and number of vessels it would need to accommodate at any one time, we designed a 26m x 40m workshop with an innovative retractable mezzanine incorporated into the design. The scheme also included a crane gantry, offices, drainage upgrading for the whole site and an extension of the quay. Having appointed us as project managers for the whole scheme, the client had the benefit of having just one, director-level, personal point of contact for all aspects of the job, from design to completion.

## The Datrys approach: All under one roof...

The Holyhead Marine expansion project drew on all the wide-ranging skills we have at Datrys. Having planned and designed the new facility in close collaboration with the client, we then dealt with all paperwork, from putting together the two tender packs (one for the civil elements and the other for the structural works) to creating and monitoring the rigorous risk register. Site supervision was also our job, so any issues could be dealt with and resolved with no disruption to the client.

Paul Williams, Managing Director at Datrys, said; “As engineers, we naturally thrive on coming up with rigorous solutions to any problem that is proposed to us. But it’s more than that. Our clients appreciate the professional yet personal and responsive nature of how we do things at Datrys. It’s been fantastic to support Holyhead Marine Services during its continued expansion over the last decade and it’s a matter of great pride to us to not only work for such a high-profile and impressive client, but to have developed a great professional relationship with them.”
